MEYER ZOYSIA, FOR HOT SUMMERS

For lawns where summers are so hot, cool weather grasses turn brown, Meyer Zoysia has shown excellent results in tests at the U. S. Plant Industry station in Beltsville, Md.

Zoysia is a tropical grass which in warm climates has remarkable ability to spread and crowd out other grasses. It is not recommended for sections where Merion and Kentucky blue grass lawns are satisfactory.

Zoysia is recommended for planting in combination with Merion in and south of the following cities: Kansas City, St. Louis, Springfield, Ill.

Farther south where it is the practice to grow lawns of Bermuda and rye grass Zoysia is recommended for planting alone.

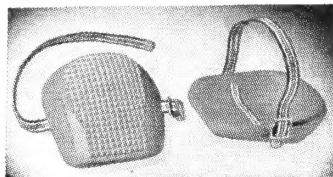

ZOYSIA IS GROWN FROM SPRIGS OR PLUGS

Seed is not available for Zoysia, but it is easily grown from sprigs or plugs. It comes as strips of sod which can be cut into plugs, or broken into sprigs, and set out in a regular pattern.

Should be planted in very rich ground, the richer the better. For early spring use sow early in autumn and protect the plants with a light covering of leaves or straw. In the South, Spinach can be grown without covering.

It requires about 20 lbs. to sow an acre broadcast; 5 to 8 lbs. per acre in drills. 1 oz., to 30 or 35 ft. of drill.

NOBEL, GIANT THICK-LEAVED. A very rapid grower, deep green and very thick. **NEW ZEALAND.** The Hot Weather or Everlasting Spinach. 70 days. The leaves greatly resemble Spinach in appearance and flavor. It makes strong plants which resist heat and give an abundance of rich green foliage all during the summer and fall. Sends out fresh growth continuously after being cut so that a supply of "greens" may be had until frost destroys the plants. Pkt., 10c; oz., 20c; 1/4 lb., 45c; 1/2 lb., 80c.

Archias' Hybrid TOMATOES

Advantages of Hybrid Tomatoes

It has been proven that true hybrids grow faster than open pollinated varieties, produce greater yields, show more vigor, and bear a more uniform product over a longer period of time. It is possible to incorporate into hybrids, disease resistance, the best feature of their parents, and to eliminate many of the bad features.

"Missouri Grown" TIMOTHY

Located as we are in the heart of Missouri's greatest Timothy-producing section, we have a better opportunity to get the best seed harvested. Our machinery is built to thoroughly clean and efficiently handle the seed in large quantities. These factors combine to make our prices lowest and quality highest. Sow 12 to 15 lbs. to the acre, or 10 lbs. Timothy with 6 lbs. Red Clover or 5 lbs. Alsike Clover. See our Red List for current prices.

KOREAN LESPEDEZA

KOREAN LESPEDEZA. America's Greatest Legume. Adapted to any soil. Makes crop of hay and seed same year sown. Reseeds itself each year, unexcelled for pasture, hay or soil building. Drought resistant. Height 15 to 24 inches. Lespedeza has done more for the Missouri farmer than any other legume introduced for many, many years. We are located in the center of the best producing area, and our stock of seed is of the highest quality, thoroughly re-cleaned to give you complete satisfaction. Sow at the rate of 20 to 25 pounds per acre. See Farm Seed List for quantity prices.

LESPEDEZA SERICEA. New perennial Lespedeza. An Oriental perennial legume; grows on poor land, acid or sour soil as well as on rich soil. Great drought resister with an enormous root system. Enriches the soil, starts growth early in spring and gives at least 3 cuttings a season with as high as 3 tons of hay per acre from a single cutting. Plant 1 to 2 in. deep, drilled or broadcast on a well-prepared bed, in spring, 25 to 30 lbs. per acre. See Farm Seed List for prices.

EARLY LESPEDEZA. New Iowa 6. Earlier and Heavier Yield. New early Lespedeza—averages 6 inches taller, much earlier, and heavier yielding than common strains, making it ideal for folks who want a taller and earlier type and who have not had success with ordinary Lespedeza. Grows anywhere—especially valued where other legumes will not grow. Will grow on the sourest soil and will build it up by adding nitrogen. Seed is short—order early. Plant same as Korean Lespedeza. See Field Seed Price List for quantity prices.

EARLY No. 19604 LESPEDEZA. Widely known as Early Giant. A real drought variety—early, tall, quick grower. No wonder it has been known as Early Giant Lespedeza—adapted to climatic conditions prevailing as far north as central Iowa. Does extra well south of us too. Growth has been reported up to two feet this last year and it was really dry. Will stand lots of hot weather. Heavy sure seed producer—as much as 1000 lbs. per acre. See Field Seed Price List for prices.

NEW! ALFALFA VARIETIES

NON-HARDY AFRICAN and INDIAN ALFALFA. Two fine varieties suitable for two or three-year rotation—for quick hay crop and grazing. Our seed is California grown, finest quality. See Field Seed Price List for prices.

RHIZOMA ALFALFA. A new variety that spreads from underground roots. Developed in Canada. Extremely hardy and shows remarkable resistance to drought. Main area of adaptation seems to be in the northern states. Seed supplies very scarce. Order now for a start of Rhizoma. See Farm Seed List for prices.

NOMAD ALFALFA. This Alfalfa is also sometimes called the Creeping Alfalfa. Its origin traces to dry and northwestern areas. Not recommended for hay production; however, it has so many wonderful features such as high drought resistance and the ability to withstand heavy grazing. It spreads rapidly. You'll want to try at least a small amount of this variety. See Farm seed List for prices.

MEADOW FOXTAIL. A long season, perennial grass. Great for wet land. Will withstand long periods of overflow. Generally easier to get a stand of this than of Reed Canary Grass. Adapted to upland. Grows in shade. Although basically a wonderful grass for wet land, it can give good returns on well-drained soil of medium fertility that is fairly well supplied with moisture for winter and early summer growth. It is similar to Orchard Grass in its ability to grow in shady areas. See Farm Seed List for prices.

FIELD CLOVER

See Our Farm Seed List or Write for Clover Prices!

Medium RED CLOVER. Native Missouri grown. Extra fancy, clean, high germination. It pays to plant the best. Clover that is adapted to Missouri soils and conditions is the cheapest in the long run. Beware of poor quality foreign seed offered at lower prices.

MAMMOTH RED CLOVER. Is a large variety of Red Clover, superior for soil building. Our stocks are the very finest.

KENLAND Red Clover

Blue Tag "Certified"

A new, very productive variety, disease resistant, and highly recommended for those that are looking for an improved medium Red Clover. Kenland has definitely been proved superior in every way including a much longer "stand" life. We believe that it will pay you to use this new strain.

See Farm Seed Price List for prices.

ALSIKE Clover

Grows Where Other Clovers Fail

Alsike does well on low, wet, heavy soil where Red Clover, Sweet Clover and Alfalfa can't take it.

Alsike hay is high in protein, and fully equals Red Clover in feeding value. Does fine planted along with Timothy, Tall Fescue, or any other good grasses. Alsike seed being small, requires only 6 to 10 pounds per acre. Our Alsike is hardy, northern grown, the very finest quality, dark, green berry, free of noxious seeds. It pays to plant the best.

See Farm Seed Price List for prices.

Hubam, Annual Sweet Clover.

GIANT LADINO

U. S. Department of Agriculture says: "Ladino is the largest growing form of White Clover. It is similar to White Dutch, but grows twice as large." It is a long-lived perennial, excellent for grazing, as well as producing a most nutritious and palatable hay crop. Its tap root goes down one to three feet. The stems run on the ground, taking root. It is not subject to Alfalfa diseases and is ideal to plant after Alfalfa. It does not bloat livestock as much as other Clovers, but is safer to plant with Timothy, Red Top, Tall Fescue, Kentucky Blue Grass, Orchard Grass and Rye Grass.

See Farm Seed Price List for quantity prices.

SOY BEANS

For hay or oil processing. See Farm Seed Price List for varieties and prices.

MILLET SEED

Sow 30 to 40 pounds to the acre

GOLDEN or HAY MILLET. It is sown in the spring, and after harvesting leaves the ground in the finest condition for Wheat.

PROSO MILLET. Also known as Hog Millet. Grown almost exclusively for seed, yielding up to 60 to 70 bushels per acre. Excellent poultry feed. Needs warm weather and soil for quick germination. Sow 40 to 50 lbs. to the acre. Drill in close rows or broadcast.

TALL OR KENTUCKY "31" FESCUE

Discovered growing many years ago on a mountain farm in Kentucky, hence its name. A perennial bunch grass, puts out blades in great number. Is best suited as a permanent pasture since it improves with age, building up a heavy, dense sod, prevents erosion, produces a large amount of succulent pasture the year around. Grows anywhere but the better the soil, the better the grass. Sow in middle August, September or early spring months. We offer the very finest strain, free of noxious weeds and rye grass. See Farm Seed price list for prices.

ALTA FESCUE New Wonder Grass.

There's nothing like it. Heavy yielding wonder grass lives 20 years or more, is highly palatable, a summer producer, soil builder and weed eradicator.

Alta Fescue produces as much or more fall and winter foliage as other grasses adapted solely to those seasons. Produces more summer foliage than all but the strictly summer-growing grasses. High feeding value and palatability. Rapid recovery after pasture. Wide adaptability to soils, climate, and moisture. See Field Seed list for prices.

BIRDSFOOT TREFOIL

Sow 5 to 8 lbs. per acre alone—less in mixtures.

A hardy deep rooted, long lived legume, fine stemmed and leafy with feeding value equal to Alfalfa. Will grow on land too low in fertility for Alfalfa; stands heat and drought. Especially valuable in permanent pastures. We offer only the broad leaf variety which is recommended for this section. See Field Seed Price List for prices.

NOW! "Chemical Coated" Farm Seeds Assure Better Stands

This chemical protection is a special formula of various disinfectants with root growth stimulant added. This kills diseases that affect germination and plant survival and increases root growth.

When the seed is sown during cold, wet weather, newly planted seed is often attacked during the germinating period causing the sprout to die. "Chemical coated" treatment kills these disease organisms, giving the new sprout an opportunity to come through the soil and survive. This is why you get so much larger percentage of plants from "chemical coated" seed.

COST OF THIS TREATMENT

Because many of our customers not being familiar with this new improvement in agriculture still want their seed untreated. Consequently, our price list on most items does not include "Chemical coating." If you are one of the many that prefer your seed to be treated, we are equipped to render this service quickly using the very latest model of slurry treaters, the best known formula at the following reasonable prices. In ordering, mention which lot you want "chemical coated" and add to your order for this service as follows:

Most Clovers, Lespedeza, Alfalfa, Oats, Beans, Sudan and similar size seeds:

\$1.25 per 100 lbs. extra.

Grasses, Timothy, Brome, Orchard, Fescue, Ladino, Red Top and similar seeds:

\$1.75 per 100 lbs. extra.

When coating "certified" seed we must break the seal. Please keep this in mind, when ordering as they cannot be coated in a sealed bag.

BROME GRASS

"The Miracle Drought Resister"

Sow 20 lbs. per acre.

One of the most sensational additions that American agriculture has received in years. It is rather slow the first season, but the second year is great and once established you have it for keeps. It is hardy, permanent, stands the driest of droughts, the hottest summers, and the coldest winters. It is the first green grass in the spring, the last in the fall, and stays green all summer when other grasses are dry. It is very high in feeding value; will carry from 50 to 100 per cent more livestock per acre than Blue Grass. Cut for hay, you will have from three to four tons per acre. All classes of livestock like it as it is very palatable. It is a grass and so cannot poison the stock. Sow either fall or spring, using 15 to 20 lbs. per acre. Have a firm, well packed seed bed, harrow in lightly and roll well if at all possible. Do not cover too deeply—one-fourth to one-half inch is plenty. You can get two crops in a season. Harvest when it is one-third to one-half in bloom. It is easily killed under cultivation if you want to get rid of it. Our Brome Grass is Achenbach (Southern Strain), Native Kansas Strain. 10 lbs., \$3.50, postpaid. See Field Seed List for quantity prices.

Orchard Grass

One of the best long-lived, deep-rooted grasses for year round pasture or hay or to reseed on old Alfalfa sods. It does well on practically every type of soil, including acid soils, thrives in the shade, grows vigorously and produces large crops of nutritious hay relished by all livestock. It recovers quickly when cut or grazed. It grows the year round with maximum growth in the spring and fall. Should be included in every hay or pasture mixture. Sow 14 lbs. per acre with other grasses or 30 to 35 lbs. alone in early spring or fall.

See Farm Seed Price List for quantity prices.

Broom Corn

(Evergreen.) A fine crop for dry land farming where there is a market for the straw for brooms. It has practically no food value. Plant in 3 1/2-foot rows, thinning out to stand 8 to 10 inches in the row and cultivate like Corn. 6 lbs. per acre. Lb., 45c; 5 lbs., \$1.75, postpaid. See Farm Seed Price List for quantity prices.

Reed Canary Grass

On low, wet, poorly drained soils, on thin, eroded hillsides Reed Canary comes through like a champion. It is the lowest priced this year since its introduction. Because of this low price we think more farmers than ever before should sow Reed Canary Grass.

Reed Canary makes wonderful pasture, excellent high yielding hay and once established makes a tough sturdy sod that lasts for years.

See Farm Seed Price List for Prices.

SUDAN GRASS

WHEELER SUDAN. "Certified." Sudan is primarily a hay grass. Its slender, leafy stems make it easy to handle with ordinary haying machinery, making its greatest growth during July, August and September when native grasses are less productive. Will grow successfully on most every class of soil. Ready to cut in 45 days. Broadcast at the rate of 20 to 30 pounds per acre. Cut when in bloom for highest feeding value. Our strain of Wheeler Sudan is "Blue Tag" certified. It is the best obtainable and the cleanest seed of this strain. Much preferred to the non-certified Common.

SWEET SUDAN. "Certified." Sweet Sudan is a greatly improved variety from a hybridization of Leota Red Sorghum and Common Sudan. It has great palatability, live stock eating it to the ground before touching Common Sudan. Stalk contains more sugar, making it higher in feeding value.

PIPER SUDAN. "Certified." Piper Sudan Grass was developed and released in Wisconsin by the Agricultural Experiment Station, and has been extensively tested in Missouri and found to be taller than Wheeler, recovers faster after cutting, and has greater leaf spot and chinch bug resistance. Growing plants have shown far less prussic acid potential than other varieties. We have had some excellent reports on this variety this last year.

GREENLEAF SUDAN is a Kansas introduction, and one of the finest of the new Sudans. Strong resistance to leaf disease. Low in prussic acid, superior in tillering, leafiness and vigor. If you want Sudan for pasturing this variety is recommended as the safest of all Sudans for this purpose.
